

## KENYA – Tsavo to the Masai Mara

“An impressive 496 species of birds were seen on the June 2011 tour of central Kenya, and a minor total of 15 species were heard only – meaning 511 forms were recorded by members of this fortunate group! These totals included five storks, 38 birds of prey, nine hornbills, 11 barbets, five owls including three species of eagle-owls, 19 cisticolas, 17 sunbirds, 16 starlings and 14 Ploceus weavers. We also recorded 61 species of mammals (excluding a few unidentified bats, shrews and rodents), including no less than four Leopard sightings and 15 Lions, not to mention both rhinos, Lesser Kudu, Serval, Cheetah, Great Crested Porcupine and many more. Then there were 25 identified reptiles and amphibians, including the impressive endemic Elementeita Rock Agama, plus a few frogs that got away. A whole host of butterflies and dragonflies were also seen, as well as the fascinating botanical fauna, and the whole experience was nearly too much! This incredible diversity was experienced in the seclusion of luxurious lodges deep in the heart of prime birding country, offering not only comfort but the finest food that anyone could hope to find in the wilds of any country on this planet.

We headed off on our first morning to the nearby Nairobi National Park for our introduction to eastern African birding. As we waited for our tickets at the park’s entrance, colorful jewels such as Variable and Scarlet-chested Sunbirds appeared, as did Holub’s Golden and Baglafaecht Weavers. There were noisy White-browed Sparrow-Weavers in the parking lot and comical Speckled Mousebirds were creeping through the bushes. Once inside the park, views of ponderous Black Rhinos, stately Masai Giraffe and grassy horizons dotted with gazelles and ostriches left no doubt in participants’ minds about where they were. These eastern African neophytes had over a hundred new species of birds on this first day, with no idea that things were only going to get better! Following this full day, a very tasty meal capped the promise of a good nights rest.

Under a cover of light clouds, we departed through Nairobi traffic toward the Lukenya Hills, our first stop on the long drive to Tsavo West National Park. During our pleasant walk in the hills, we encountered many species in a mixture of highland and lowland forms. Grey-capped Social Weavers were the most numerous species present, busily engaged in nesting activities. Banded Parisomas were very vocal but it was a while before we had good views. Some species remained in cover, as it was a bit on the cool side. A pair of stately Verreaux’s Eagles patrolled the rocky crags for luckless Hyrax, disturbed by some climbers up on the escarpment. We were fortunate enough in locating Southern Grosbeak Canary on the walk back, a species we would not encounter again, and equally lucky with Grey-headed Silverbill. A later stop for refreshments at Hunter’s Lodge was also a pleasant experience, with kingfishers of three species posing a distraction whilst we enjoyed our beverages. A little further on we had our picnic lunch, and after this continued on to Tsavo West. At the museum area just inside the Mtito Andei gate, we stirred up a large assemblage of birds assisted by imitations of Pearl-spotted Owlets. This was an excellent experience with the dry country species, and amongst the birds here were fiery Orange-bellied Parrots, comical Von der Decken’s Hornbills, noisy Crested Francolins and busy Hildebrandt’s Starlings. Continuing along the road we stopped for Black-headed Plovers and a perched Golden-breasted Starling. As we neared Ngulia with evening falling, a Freckled Nightjar called from concealment near a lava flow. A Leopard appeared prior to dinner, bringing the tour participants to the forecourt prematurely. The excited observers were also rewarded by several Greater Galagos at their feeding tray and a large herd of Buffalo busy at the small pond 10 meters away. After dinner we retired to bed and rested, readying ourselves for the excitements of the next day.

## KENYA: Bird List...2

After an early breakfast the following morning we set off down the escarpment into the thornscrub below. The recent rains meant that the area was leafy with many bushes providing dense cover, which is atypical at this time of year. It was quite a challenge to find birds that were loath to sing or show themselves, however with perseverance the species fell one by one and by the time we returned for lunch we had seen virtually all of the areas residents. Star performers included Pringle's Puffbacks, Bare-eyed Thrush and stunning Tsavo Sunbirds. Sitting in low scrub were a few Pale Prinias – a species from the north increasing in this area – and Yellow-billed Hornbill. With persistence we also had wonderful views of secretive Red-naped Bush-shrike, a species that is so rarely seen and easily overlooked. We departed in the afternoon for a local drive that led us to a good assortment of species, the best of which were Greater Painted-snipe and Pygmy Kingfisher in a wooded lugga. A rather boisterous African Elephant gave a half-hearted chase, seeming to have a dislike for the mini-bus that was behind us, but was soon in front! That evening we were visited by another Leopard.

The next morning after another early breakfast punctuated by visitations from local avian residents, we set off for more birding in the dry scrub before departing westward to Amboseli. Along the way we stopped for a picnic after calling in an inquisitive Rosy-patched Bush-Shrike and seeing elegant Taita Fiscal. Just before joining the main road, we stopped at a small wood to observe several White-fronted Bee-eaters. Soon we were entering Amboseli National Park and seeing our first elephants of the day. After a scrumptious meal we adjourned to the lounge to formalize the day's extensive wildlife list and then retired for a very comfortable night.

Our full day in Amboseli was a magical experience. Mount Kilimanjaro, however, would not raise its misty veil until late afternoon, and as soon as there were hopes it would show itself, it clouded over again! Nevertheless, the evening star show was spectacular. The swamps fed by mountain runoff attract a large variety of wetland species, and we were able to appreciate Black Egrets and Goliath Herons that were associating with the commoner marshland species. Groups of White Pelicans floated on the open water, and we were most fortunate to find two examples of the rare Chestnut-banded Plover. Taveta Golden Weavers at the northern extremity of their range and, sadly, in non-breeding dress came to see the group in a marshy area, and comical African Jacanas strode across the floating vegetation. The swamps were very healthy and recovering from the recent drought, and noisy and attractive African Fish-Eagles yodeled from remnant trees adjacent to the water as Two-banded Courser piped from the barren dusty landscape, Malachite Kingfishers waited patiently on papyrus stems and White-headed Buffalo-Weavers launched clumsily to reveal their red rumps. Closer to the lodge we saw the world's heaviest flying bird, the Kori Bustard, foraging between the rooms. Toward the main gate we found Buff-crested Bustards and, after a very concentrated effort, eventually tracked down White-headed Mousebird and several Pygmy Falcons. Amongst the mammals we were also treated to Hippopotamus, Elephants, Rothchild's Giraffe and the unusual Gerenuk. After a sumptuous meal we ventured out again in the afternoon. The Taveta Golden Weavers were now in the car-park of the grounds and, with the help of a Pearl-spotted Owlet, we called up an assortment of other arboreal species. On our drive around the marsh we were treated to the aerial mastery of Collared Pratincoles as beautiful Crowned Cranes responded with a quick two-step, followed by offspring mimicking their parents' every move.

The following morning we flew to Nanyuki and, after a delicious cappuccino, continued on to Mountain Lodge in time for a wholesome lunch. The remainder of the day was spent birding from the rooftop. There was a good variety of birds in the bushes and passing overhead, and mammals such as African Buffalo and Bushbuck came and went along with smaller forest inhabitants like pestilent Syke's Monkeys and lesser species like Large-spotted Genets and Cape Hares. The variety of birds kept the group entertained as numbers of impressive Silvery-cheeked Hornbills honked from the trees and Red-fronted Parrots flew in to preen before the sun set. In the evening the Tree Hyraxes commenced their insane screaming.

### **KENYA: Bird List...3**

The following day we drove up Mt. Kenya to the Meteorological Station at 10,000 feet. Here we saw several very attractive Abyssinian Ground-Thrushes and sparkling Tacazze Sunbirds around the cabins. The endemic Jackson's Francolins proved difficult to locate, but we finally caught up with them as we prepared to leave. Meanwhile, the group was introduced to a host of sub-alpine plant species that were new to them, although the genera were familiar. By late afternoon we were back on the rooftop at Mountain Lodge, where we observed a few more new species and remained until dark, when the nocturnal mammals put in their appearances. After a delicious feast, we settled down with our hot-water bottles for a comfortable night.

We woke to a cool and overcast morning. The alpine zone of Mt. Kenya was shrouded, but we could at least appreciate that it was not raining, and perhaps not as cold as it could have been. We departed at a slow pace, finding many new species along the roadside. Moustached Green Tinkerbirds called in the high canopy to challenge us from a clump of mistletoe, but they were very hard to see. Many Hartlaub's Turacos were active and showy, however, gliding across clearings on their intensely crimson wings. We finally arrived for lunch at Naro Moru River Lodge, where we had a short rest before driving along the road bisecting Solio Ranch.

We traversed the same route the next morning, seeing much of what we had encountered the previous evening. Our next stop was a visit to Mackinder's Eagle-Owls with well-grown offspring, which glared at us from a rock face on the other side of a quarry. At Ndaragwa we found a friendly party of Brown Woodland Warblers. A few secretive swamp birds were found at a swamp en route to Nyahururu, and in the Thomson's Falls car-park were exquisite Tacazze Sunbirds. We continued on to the Lake Baringo Club where, in the evening, we enjoyed the sight of Hippos grazing on the lawn.

A morning walk around the garden gave us a number of new species, including many Madagascar Bee-eaters, Woodland Kingfishers and dazzling Beautiful Sunbirds. Breakfast was also punctuated by many new species coming to the bird table, Jackson's Hornbill and several weaver species amongst them. After breakfast we spent the morning seeking out the local specialties. We patrolled the nearby cliffs and woodland to find Bristle-crowned Starlings, teetering Brown-tailed and bouncy Cliff Chats. With local assistance of the resident junior birders, we were able to appreciate Greyish Eagle-Owl, Heuglin's Courser and Spotted Thick-knee all at their daytime retreats. After lunch we departed for Nakuru, enjoying the dry country birds and large, mating Leopard Tortoises on the way.

Mere words cannot convey the magical spectacle of Lake Nakuru's Lesser Flamingos in the first rays of sunlight heralding the new day. This year they were accompanied by large numbers of Greater Flamingos. The lake was very busy with feeding cormorants, ducks, grebes, gulls and terns. The woodlands also held quite a variety of birds, including Black and Red-chested Cuckoos, Scaly-throated Honeyguides, Red-throated Wrynecks and the very local Grey-crested Helmet-Shrikes.

We left early the next morning to explore a recently visited area of high grasslands, where we were successful with three highland cisticolas – Levillant's, Wing-snapping and Aberdare. The Aberdare Cisticola was a Kenyan endemic, as were the attractive Sharpe's Longclaws that we found at the same location. Our final new destination was the incomparable Maasai Mara. The journey required a day of travelling, punctuated by roadside stops for a few more new species such as reclusive Banded Prinias, curious Grey-throated Barbet and dowdy Stuhlmann's Starlings. We were making good time, but after Lemek we were amazed to see a rushing torrent where the side of the road once was. There had been incredible local rain, and it is difficult to describe the vista of the plains turned into a temporary lake!

## KENYA: Bird List...4

The next morning prior to breakfast we had an early morning walk in the lodge garden, where we found Ross's Turaco, White-browed Robin-Chat and beautiful sprite-like Blue Flycatchers amongst an impressive variety of species. On the grassy swath in front of the fence there was a great array of plains mammals including African Elephant, Wildebeest and Masai Giraffe. After breakfast we spent the afternoon on the nearby Sabaringo Valley and Oloololo Escarpment. With some effort the area's specialties were found, including the rare Ovampo Sparrowhawk. A drive to the edge of the escarpment provided a stunning view, overlooking the Maasai Mara and the winding Mara River far below us. Here we discovered the fluorescent Mwanza Flat-headed Agama. Following lunch and a short siesta we visited the Serena Oxbow Swamps, where we found a variety of waders and herons, as well as a comical Ground Hornbills.

Another early morning walk around the camp before breakfast rewarded us with a pair of Black-headed Gonoleks that arrived as vagrants from Lake Victoria and found the place to their liking. As we drove across the Mara we located a number of special western species, including Senegal Plover, Saddle-billed Storks, Bare-faced Go-Away Bird, Usambiro Barbet and Sooty Chat. The nighttime game drive at Siana Springs was interesting, producing not only Dusky but also Montane Nightjars, which provided incredible up-close and personal views as they rested on the ground in the spotlight. Of course there were mammals, too, with numerous Spring Hares, White-tailed Mongooses and Spotted Hyenas.

On the tour's final morning we had a sortie into a local valley, finding Tabora Cisticolas and Magpie Shrikes at their only Kenyan location, as well as Green-capped Eremomela and dazzling Marico Sunbirds. Amongst the large variety of species many were now starting to become familiar – and it was time to leave!

We flew back to Nairobi after saying our goodbyes to Edwin, whose overland return was going to take a lot longer than our 40-minute trip. Not only did Edwin chauffeur the group with expertise around central Kenya, but he was a veritable mine of information on all aspects of Kenyan life and a very capable birder and all-around naturalist with extremely sharp eyes, as he demonstrated on so many occasions.

After lunch and time for repacking, our group members met up for an early tasty meal prior to catching their respective flights back to the north. It had been a very successful tour and it was difficult to absorb all that we had seen in a mere two weeks, covering just a small portion of this most-birdy of countries. Only the participants will notice everything left out of this briefest of reports, for what we experienced would easily run into volumes! – *Brian Finch*
