

HUNGARY: BIRDS AND BUTTERFLIES

"Nine of us arrived in Budapest having departed Gatwick at about 13.40 and were met by Safi our Hungarian host and Barbara, who had arrived earlier from Germany. We made a quick stop outside the airport to get views of Sousek before heading south-east towards the Hortobágy Puszta. A distant Imperial Eagle was seen from the minibus just before lunch, which was a roadside stop; accompanying us were several Crested Larks and Stonechats. Before reaching our destination we looked around Lake Tisza, seeing Purple, Grey and Squacco Herons, as well as Common Bluetail and Small Red-eyed Damselflies.

Sunday was our first full day, which began at the Hortobágy fishponds. Here we had good views of Golden Oriole, Syrian Woodpeckers and Penduline Tits, one of which was in the process of nest building close to the path. On the more open water, Lesser Emperors and Green-eyed or Norfolk Hawkers were patrolling, and we were able to compare White-tailed and Black Skimmers perching and egg-laying. Returning to the hotel we saw our only Lesser Fiery Coppers of the trip. In the evening we were taken to a restricted area and saw several Great Bustard and also had wonderful views of a male Montagu's Harrier quartering the grassland close by.

Leaving the Great Plain for the mountainous north, we stopped on the way to see our first Rollers and later, Bee-eaters at their nest sites. We arrived in the Aggtelek National Park at about 14.00 and after lunch walked down the wooded valley, seeing several Lesser Purple Emperors and a few Hawfinches. Many butterflies were seen and photographed mud-puddling beside the river running through Josvafo village. The flowery openings contained lots of butterflies, including all three species of short-tailed blues and Alcon Blues, however, the biggest surprise was the first record for the area of Geranium Argus. In the evening a few of us went moth-trapping on a nearby hillside.

On Tuesday we walked along the Menes Valley towards the lake, seeing many butterflies in the fields on the approach to the wooded valley. Here were our first views of the beautiful Pallas's Fritillary along with Lesser Marbled and Marbled Fritillaries. A couple of Niobe Fritillaries, rare in this area, flew with many other fritillaries, including Silver-washed, Dark Green, Heath, Assmans and Spotted. The lakeside had the only sightings of Common Clubtail and Small Pincertail dragonflies but there were plenty of Blue Featherlegs, Broad-bodied Chasers and Blue Emperors about. In the afternoon we stopped close to the Slovakian border and walked in the hills where Turtle Doves called continuously as we saw a great variety of butterflies.

A circular walk around the Tereszteny Plateaux on Wednesday produced some excellent butterflies seen nowhere else on the trip and photographers were able to get good shots of Chapman's, Anomalous and Meleager's Blues. However, the greatest prize, were several Osiris Blues feeding from their larval foodplant *Onobrychis*. After lunch we went to Szelce puszta and saw four Hungarian Gliders, including one egg-laying on *Spiraea* bushes and two male Stag Beetles. In the late afternoon a walk to the plateaux from Josvafo village gave wonderful panoramic views towards the Slovakian mountains.

On Thursday we left Josvafo and headed for the Bukk Hills, stopping first at the lake near Aggtelek. In the afternoon a walk along Borsodszentgyogy Valley gave us our first and only views of Common Gliders and many Heath and Marbled Fritillaries, as well good numbers of Map and Scarce Coppers. After lunch we continued to the Bukk hills reaching Hotel Nomad at about 17.00 and took a brief walk around the village where our first Serin was seen.

On Friday we had a brief stop at a Bee-eater colony, followed by a visit to the grounds of a monastery where two Peregrines sparred with Ravens high on the cliff face. We then continued upwards to the high plateaux where we made slow progress, as the butterflies were so numerous. Here, the greatest surprise were several False Heath Fritillaries, though there were many other fritillaries, including Silver-washed, High Brown, Dark Green, Weaver's and Queen of Spain. We also encountered our first two Small Tortoiseshells. On our return we stopped off to have a taste of local wine and after dinner went into the valley where a local bat recorder was netting. Two Bechstein's bats were caught.

The next morning we visited Farm Lator and saw the first fresh Small Pearl-bordered Fritillaries and a beautiful *Valesina* form of the Silver-washed Fritillary, as overhead, a Short-toed Eagle passed by. We continued through the village up onto the plateaux and spent the morning in the dry grassland. A Sand Lizard gave us a good view of its brilliant green markings and a Wart Biter was also found. At the lunch spot Woodland and Great Banded Graylings accompanied us and a darter dragonfly turned out to be an immature male Moustached Darter. We returned along a rough track and after a thunder shower passed, we stopped at a quarry, which turned out to be very productive. Three beautiful Chequered Blues flew around their larval food plant, White Sedum, and our first but worn Blue-spot Hairstreak was found. An amazing and rare bush-cricket *Saga pedo* was discovered and photographed, this one of the largest European insects. On the quarry face a Rock Bunting was singing along with several Black Redstarts.

On our final day we left the Bukk Hills and headed for the edge of the Great Plain. Our first stop on the roadside gave us good views of Saker Falcons and more distant views of an Imperial Eagle. More Rollers were seen and our only Knapweed Fritillary was the final butterfly to our list. A rough walk across hot dry grassland to a hide overlooking a large lake proved worthwhile, as the first birds seen were two Black Storks. The view from the hide then revealed many Spoonbills, Spotted Redshanks, Great White Egrets as well as Garganey, Pochard and many Greylag Geese. On our way to the airport we stopped by the roadside for lunch and found two of Europe's largest beetles around the surrounding oak trees. There were several dead and living Stag Beetles but the most impressive was the huge Longhorn beetle *Cerambyx cerdo*.

We arrived at Budapest airport at about 14.30pm and after saying goodbye to five of the group who were staying on to spend a few days exploring Budapest, and Safi, left for Gatwick at about 16.45, arriving home at 18.15." Richard Lewington

Bird List:

This bird list includes all the species seen during our tours to Hungary.

Column A = Number of tours this species has been recorded on.
Column B = Number of days this species was seen on the last tour.
Column C = Maximum daily count for this species on the last tour.
H = Heard only
C = caterpillars found rather than the adult butterflies
