

## VIETNAM 2009

### POTENTIAL BIRD LIST

#### Key to the status codes:

Our first tour to Vietnam ran in February 2008. The species seen on that tour are listed below. However, due to some exceptionally bad and cold weather in early 2008, many species we expected to see were missing. Therefore in order to give you a more realistic idea of what you can expect to see in a normal year in Vietnam, we have included other potential species in the list below with a coding to show how likely they are to be encountered.

Column A:    1 = should be seen  
               2 = may be seen  
               3 = possible but not likely  
               \* = species seen on the 2008 tour

Column B = total number of days that the species was recorded during the 2008 tour

Column C = maximum daily count for that particular species during the 2008 tour
